COMPACTNESS

The B110W is very efficient and can perform tasks reserved for higher weight machines. Thanks to its enormous lifting capacities and its precise hydraulic system, this 11 tons is capable of transporting and positioning particularly heavy loads on construction sites. This machine has great advantages for the logistics of materials and is therefore very interesting in construction and especially for the road construction. Equipped with a grab bucket, it allows in horticulture to catch and to load trunks.

ENGINE

Powerful, economical and ecological EU Phase IIIB / EPA Tier 4 Final. The B75W is also equipped with an Eco mode to reduce fuel consumption.

QUALITY OF COMPONENTS

Components developed in Europe and renowned for their excellent quality. The design and performance of the components make it possible to carry out heavy construction tasks and ensure a long service life.

EASY MAINTENANCE

The main organs of the machine are accessible quickly. Maintenance trapdoor can be opened without tools.
CAB
Designed to ensure maximum comfort and productivity for the operator, the booths are equipped with a damping system for noise and vibration. They are ROPS / FOPS certified.

EASY TO USE
Thanks to their ideal arrangement, the control levers make it possible to carry out movements with exceptional precision. Driving proportional hydraulic circuit.

HIGH PERFORMANCE
Improvement of the components of the powerline (hydraulic, distributing engine, pump): not to have to choose between power and compactness. The Yanmar customers can so make heavy tasks of construction site in narrow spaces.
WORKING RANGES & DIMENSIONS: TWO-PIECE ARTICULATED BOOM (MM)

All values in tons (t) were determined acc. to ISO 10567 and include a stability factor of 1.33 or 87% of the hydraulic lifting capacity. All values were determined with load hook. If a bucket is attached, the difference weights bucket minus load hook must be deducted from the permissible payloads. When used for load hook applications, excavators must be equipped with hose-rupture valves and overload warning device in compliance with EN 474-5. Working equipment: Two-piece articulated boom, twin tires, dipperstick 2000 mm

Abbreviations: S = Supported by blade, T = Traveling
